Ripple Rejection	RR	23V≤V _{IN} ≤33V,f=120Hz,T _J =25°C	34	48		dB
Dropout Voltage	V_D	T _J =25°C		1.7		V

Note 1. The Maximum steady state usable output current is dependent on input voltage, heat sinking, lead length of the package and copper pattern of PCB.

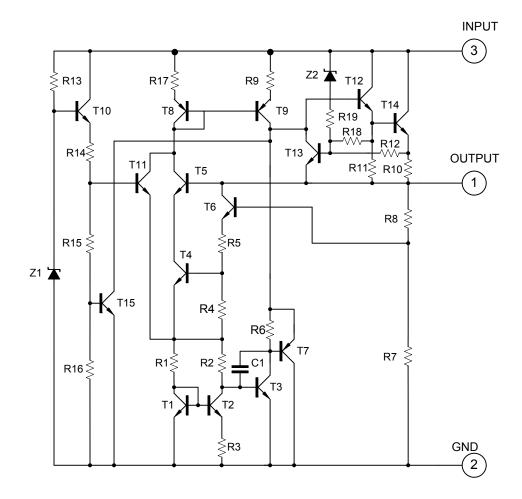

^{2.} Power dissipation < 0.5W

■ APPLICATION CIRCUIT

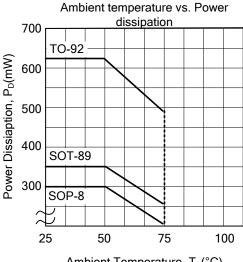

Notes: 1. To specify an output voltage, substitute voltage value for "XX".

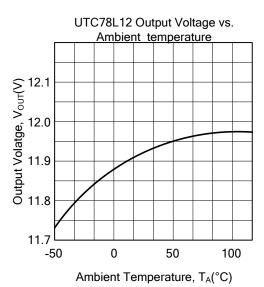

- 2. Bypass capacitors are recommended for optimum stability and transient response and should be located as close as possible to the regulators.
